

30 June 2010

### Investor Profile

This Fund is designed for investors desiring to diversify their portfolio and hedge against inflation or currency devaluation and are willing to accept the additional risks associated with investment in gold and gold related securities.

### Portfolio Manager

John C. Hathaway is the portfolio manager of the Gold Fund. Prior to joining Tocqueville, Mr. Hathaway spent 8 years with the investment

advisory firm David J. Greene, where he became a Partner, then founded and managed Hudson Capital Advisors, followed by 7 years with Oak Hall Capital Advisors, Inc. as the Chief Investment Officer. Mr. Hathaway has been a portfolio manager with Tocqueville since 1997. He received his MBA from the University of Virginia and his BA from Harvard University.

### Fund Objective

The Tocqueville Gold Fund seeks long-term capital appreciation.

### Investment Strategy

The Tocqueville Gold Fund seeks to achieve its investment objective by investing at least 80% of its net assets, plus borrowings for investment purposes, in gold and securities of companies located throughout the world that are engaged in mining or processing gold. The Fund follows a value approach to investing and the portfolio manager will identify companies that are undervalued based on his judgment of relative value and growth potential.

### Performance

	Average Annual Returns as of 6/30/10					
	3 Month	YTD	1YR	3YR	5YR	10YR
Fund*	11.80%	14.22%	65.70%	15.43%	23.56%	24.55%
Phil. Stk Ex. G/S Index	16.86%	5.95%	28.59%	10.19%	14.91%	13.28%
S&P 500 Index	-11.43%	-6.65%	14.43%	-9.81%	-0.79%	-1.59%
Lipper Precious Metal Fund Index	9.74%	10.68%	45.32%	12.87%	22.68%	21.91%

	Fund	Lipper Category Average
Turnover Ratio:	9%	55%
Expense Ratio:	1.50%	1.38%
Redemption fee:	2.00% first 120 days*	1.54%

Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Fund performance current to the most recent month-end may be lower or higher than the performance quoted and can be obtained by visiting our web site. The above charts assume reinvestment of capital gains and dividends and are not intended to imply any future performance.

\*The Fund's performance does not reflect the redemption fee. If deducted, the fee would reduce the performance quoted.

The Fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. The fund may also invest in gold, which involves additional risks, such as the possibility for substantial price fluctuations over a short period of time. The Fund is non-diversified, meaning it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to individual stock volatility than a diversified fund.

The Philadelphia Stock Exchange Gold/Silver Index is a good indicator of the performance of the common stock of companies in the gold and silver mining industry. It does not incur fees and expenses. The S&P 500 Index is a market-value weighted index consisting of 500 stocks chosen for market size, liquidity, and industry group representation. The Lipper Precious Metal Fund Index is an equally weighted index of typically the 30 largest gold-oriented mutual funds. Returns are adjusted for the reinvestment of capital gains distributions and income dividends. You cannot invest directly in an index.

### Calendar Year Returns

### Cumulative Returns

Hypothetical growth of \$10,000 for last 10 years

Total Fund Assets:	\$1.5 billion	Inception date:	6/29/98
Total # Holdings:	71	Manager Tenure:	11 Years

### Investment Update

Former Fed Chairman Greenspan suggests the US may have reached the limits of its borrowing capacity. If so, how will bigger stimulus packages be financed? Interest rates, already at record lows, cannot be lowered further to spur economic growth. What are the political implications of economic stagnation? According to George Soros, they are nationalism, social unrest and Xenophobia. The paralysis for economic policy is favorable for gold.

Paper currency, as we know it, is locked in an end game. Paper money is nothing more than a social contract, similar in many ways to food stamps or air miles. As the fissures in the social consensus widen, the fiscal viability of the governments that issue paper money is threatened. Confidence, essential to the acceptance of paper money, which has been ebbing slowly for many years, could disappear suddenly. This is a recipe for hyper inflation.

Such an outcome is by no means guaranteed, but the odds seem greater than at any time since the establishment of the dollar as an international reserve currency. Failing a resolution of these seemingly intractable issues, the bid for gold seems likely to remain strong. Corrections and shakeouts are inevitable along the way, but these pullbacks represent opportunities to begin or add to positions.

### Lipper Ratings as of 6/30/10

Category: Precious Metal

Overall Lipper Total Return

Based on historical total return performance. (out of 63 funds)

Lipper Key

Lipper Ratings for Total Return reflect funds' historical total return performance relative to peers as of 6/30/10. The Lipper Ratings are subject to change every month. The overall calculation is based on an equal-weighted average of percentile ranks for the Total Return metrics over the three-, five-, and ten-year periods (if applicable). The highest 20% of funds in each peer group are named Lipper Leaders, the next 20% receive a rating of 4, the middle 20% are rated 3, the next 20% are rated 2, and the lowest 20% are rated 1. The Tocqueville Gold Fund, in Lipper's precious metal funds category, received the following ratings for the 3-, 5- and 10-year periods, respectively: Total Return: 4 (63 funds), 4 (52 funds), and 4 (32 funds).

Lipper ratings are not intended to predict future results, and Lipper does not guarantee the accuracy of this information. Lipper Leader ©2010, Reuters, All Rights Reserved. **Past performance is no guarantee of future results.**

The Gold Fund is subject to special risks associated with investing in gold and other precious metals, including: the price of gold/precious metals may be subject to wide fluctuation; the market for gold/precious metals is relatively limited; the sources of gold/precious metals are concentrated in countries that have the potential for instability; and the market for gold/precious metals is unregulated. In addition, there are special risks associated with investing in foreign securities, including: the value of foreign currencies may decline relative to the US dollar; a foreign government may expropriate the Fund's assets; and political, social or economic instability in a foreign country in which the Fund invests may cause the value of the Fund's investments to decline.

**P/E ratio:** The weighted average of the price/earnings (P/E) ratios of the equity securities referenced. The P/E ratio is calculated by dividing the current price of the stock by the estimate of earnings expected over the next four quarters. **Alpha:** A statistic that measures the difference between the fund's actual returns and its expected performance, given its level of risk as measured by beta. The difference is expressed as an annual percentage. **Beta:** A statistic that measures the volatility of the fund, as compared to that of the overall market. The market's beta is set at 1.00; a beta higher than 1.00 is considered to be more volatile than the market, while a beta lower than 1.00 is considered to be less volatile. **R-squared:** A statistic that indicates how much of a fund's fluctuations were attributable to movements in the fund's benchmark index. This statistic can range from zero to one hundred. A value closer to one hundred implies that movements of the fund can be explained by movements in the index. A value closer to zero implies that movements of the fund are based on other factors. The higher the R-squared, the more meaningful the beta. **Sharpe ratio:** A statistical measure that uses standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio implies a better historical risk-adjusted performance. **Standard deviation:** A statistical measure of portfolio risk used to measure variability of total return around an average, over a specified period of time. The greater the standard deviation over the period, the wider the variability or range of returns and hence, the greater the fund's volatility.
